

Appendix 2: Summary of Transfers by Line

The table on this page shows the percent of boardings on each line that involve a transfer *to or from* another transit mode. "Line" represents a group of routes with a common trunk. As an example of how to read this table, the first row shows that that 3.51 percent of the boardings on the Fairfax Connector 101, 102, and 103 routes involve a transfer to or from another bus. It is also apparent that 30.70 percent of the boardings transfer to or from Metrorail, and another .88 percent transfer to or from VRE/MARC. These rates exclude the percent of survey responses for which the access/egress mode was not coded. "Regional weight" refers to the share of boardings on the particular route relative to all other NVTC area transit system routes.

line	regional weight	access/egress not coded	percent of boardings with coded access/egress			
			no transfer needed	Metrorail transfer	VRE/MARC transfer	bus transfer
101,102,103	234.38	5.00	64.91	30.70	0.88	3.51
